

THE SCIENCE SONG

By The Learning Station

Science, oh, oh oh!
Science is a part of our everyday lives,
Wonderful surprises right before your very eyes.
Say: Hibernation! Evaporation! Gravity!
And metamorphosis!

Hibernation is the way some animals keep warm all day,
in the cold winter months, like a bear in the cave.
Birds fly south, and that's called: migration.

Hibernation! Migration!

Frogs are in the mud and they sleep all day,
and squirrels gather nuts in their autumn days,
so they can stay warm in their winter waves,
When they do then that's called: hibernation.

Say: Hibernation! Evaporation! Gravity!
And metamorphosis!

Evaporation happens fast,
it starts like a puddle but it doesn't last.
The sun comes out and it heats to steam,
but you can see what seems to be evaporation.

Evaporation! Evaporation!

Say: Hibernation! Evaporation! Gravity!
And metamorphosis!

Gravity is a special force, it holds everything very close
to the earth,
just like a magnet pulling down to the ground,
and what comes up must come down.

Must come down!

Say: Hibernation! Evaporation! Gravity!
And metamorphosis!

Metamorphosis is coming soon for the caterpillar and
his cocoon,
He changes to a butterfly,
I don't know, do you know why it happens?
Metamorphosis!

*Say: Hibernation! Evaporation! Gravity!
And metamorphosis!*

*Science is a part of our everyday lives,
Wonderful surprises right before your very eyes.
Science, oh, oh oh! Science, oh, oh, oh! Science!*
